2 PURPOSE & CONTEXT

2.1 About this document

This document describes the technical pricing calculation flow used by the Hub application to generate customer pricing suggestions for:

1. Storage Containers
2. Portable Toilets
3. Roll-Offs

It explains:

- Data synchronization from Vendor Pricing (QuickBase)
- MySQL storage structure
- Pricing adjustment logic
- Suggestion display rules
- Record creation in Sales Management QuickBase

The purpose is to provide engineering, QA, and product teams with a complete understanding of how **pricing is calculated** and persisted.

2.2 Scope

The scope of the pricing tool calculation includes the following.

In scope:

- Vendor Pricing → MySQL sync process
- Pricing Tool filtering logic
- Pricing adjustment algorithm
- Adjustment hierarchy rules
- Field mappings between:
 - Vendor Pricing QuickBase
 - MySQL
 - Hub Pricing Tool
 - Sales Management QuickBase
- Record creation logic
- Rounding logic (when applicable)
- Experiment/Test flags
- Vendor list logic

Out of scope:

- Sales workflow usage instructions
- Pricing strategy decisions
- Manual overrides outside Hub

2.3 Roles & Responsibilities

Role	Responsibilities
Backend Developer	Implements and maintains pricing calculation logic, synchronization processes, and adjustment engine. Ensures pricing logic behaves as documented.
QA Engineer	Validates pricing calculations, adjustment behavior, rounding logic, and record creation. Confirms system behavior matches this SOP.
Vendor Management Team	Maintains Vendor Pricing records in QuickBase and ensures pricing data accuracy.
Digital Development Manager	Reviews and approves changes affecting pricing engine logic and production deployments.

2.4 Terminology

Term Used	Description
PSP	Preferred Service Provider (Vendor/Hauler)
Vendor Pricing	QuickBase app storing hauler rates
MySQL	Internal database storing synced pricing records
Pricing Tool	Hub feature that calculates pricing suggestions
Pricing Adjustment	Rule applied to increase/decrease customer price
DNU	Do Not Use flag
Zone RID	Pricing Zone Record ID
price_flag	Indicates fixed amount vs percentage adjustment
percentage	% used when price_flag = 0
amounts	Fixed value used when price_flag = 1
is_expire	Determines if adjustment expires
geography	Zip-based filtering logic
some PSPs	Adjustment applies only to specific IDs
Rounded	Indicates if final value is rounded before save

2.5 Conventions Used

The following structures are used as recommendations.

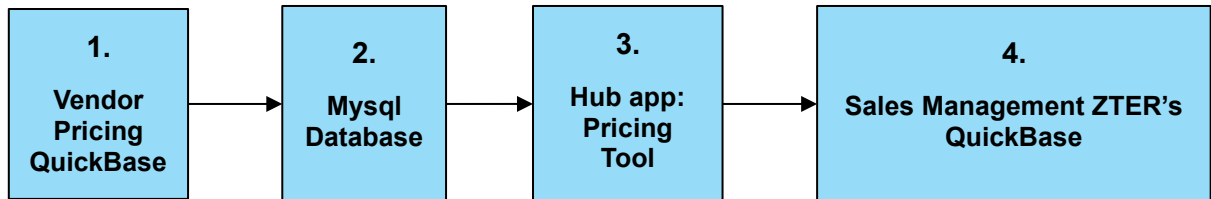

Tip: A recommendation or useful advice

Warning: A warning or important notice

Note: A notice.

3 STORAGE CONTAINER PRICING

The following information describes how PSP pricing works for storage containers and explains the current pricing calculation.

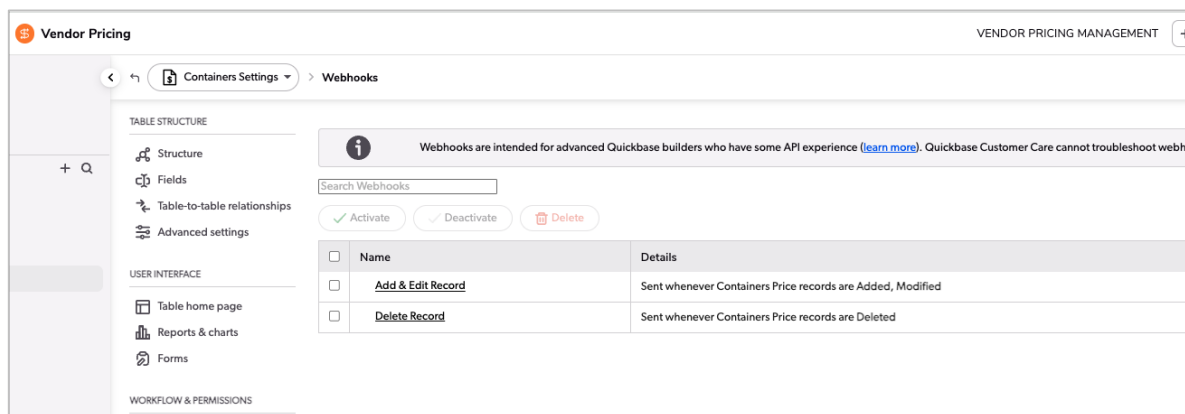

3.1 Vendor Pricing Records

Records from the Vendor Pricing app in QuickBase are saved into the MySQL database.

There are two ways to keep the records updated:

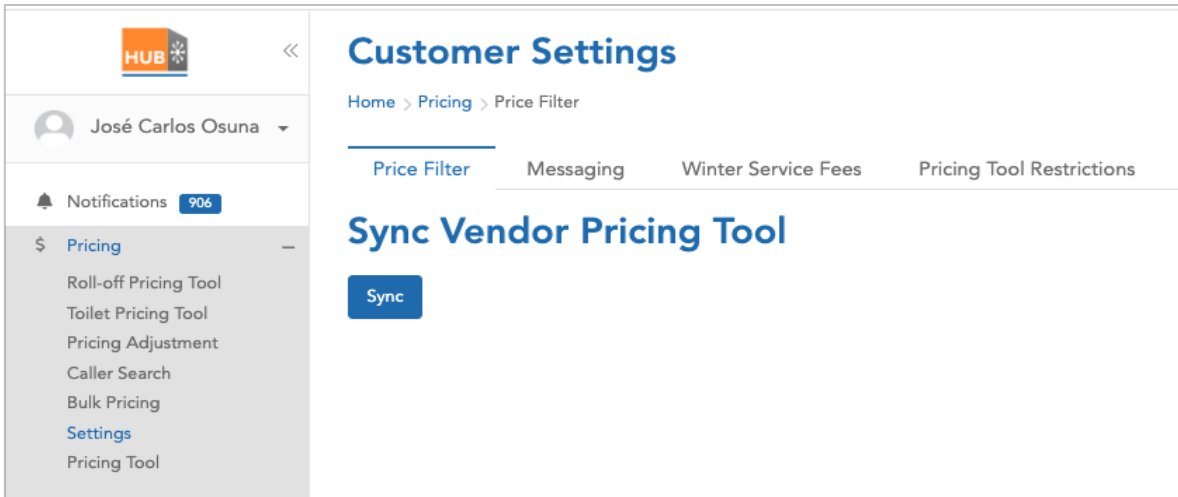

3.1.1 Vendor Pricing app in QuickBase

When a new Container is added, or a record is edited or deleted, a webhook is triggered to update the corresponding record in the MySQL database.

3.1.2 Hub app

The other way to sync all records is to click the 'Sync' button in **Pricing > Settings** in the Hub application. This option is only visible to users who belong to the **"ZTERS.VendorManagement"** group. This option syncs records for Toilets, Roll-offs, Containers, and Pricing Zones.

3.2 MySQL Database

The following are the fields saved in the MySQL database, along with their respective sources:

MySQL Field	Vendor Pricing QuickBase	FID
rid	Record ID#	3
product_category	Product Type - Product Category	11
product_type	Product Type	13
pricing_zone_rid	Related Pricing Zone	20
company_name	Company Name	22
preferred_vendor	Preferred Vendor	23
hauler_sales_rid	Hauler - Sales RID	25
zone_type	Zone Type	27
zip_list	Zip List	33
zip_based	Pricing Zone - Zip List - Zip Based	70
hauler_standard_charge	Standard Charge	34
hauler_delivery_charge	Delivery Charge	35
hauler_removal_charge	Removal Charge	36

MySQL Field	Vendor Pricing QuickBase	FID
hauler_fuel_environ_percent	Fuel Environ %	37
hauler_fuel_environ_dollars	Fuel Environ \$	38
hauler_tax_percent	Tax %	39
hauler_tax_dollars	Tax \$	40
hauler_other_rate	Other Charge	41
hauler_description	Other Description	42
hauler_frequency	Other Billing Frequency	43
hauler_dry_run_rate	Dry Run	44
hauler_relocation_rate	Relocation	45
address_miles	Pricing Zone - Address Miles	59
depot_address	Pricing Zone - Depot Address	60
depot_zip_code	Pricing Zone - Depot Address: Postal Code	64
radius_miles	Pricing Zone - Radius Miles	65
customer_standard_charge	Suggested Standard Charge 35%	50
customer_delivery_charge	Suggested Delivery Charge 35%	51
customer_removal_charge	Suggested Removal Charge 35%	52
customer_total_charge	Suggested Total Charge	58
pricing_zone_dnu	Pricing Zone - DNU	76
dnu	DNU	77
dnu_zone_or_individual	DNU - Zone or Individual	78
added_rid	Internal	NA

3.3 Hub App > Pricing Tool

By applying filters such as Zip code and address, the Pricing tool in the Hub app shows records or suggestions based on the data stored in our database, originally imported from QuickBase. The following are the columns shown for Containers:

Column	MySQL Field
Provider Name	company_name
Category	product_category
Size	product_type
Rental / 28 days	customer_standard_charge
Delivery	customer_delivery_charge
Removal	customer_removal_charge

Storage Containers						
☒ 10 ft ☒ 14 ft ☒ 16 ft ☒ 20 ft ☒ 25 ft ☒ 40 ft						
☒ Office ☒ Storage ☒ Converted Office ☒ Combo Office/Storage						
C	Provider Name	Category	Size	Rental / 28 days	Delivery	Removal
P	Container Source Storage & Roll-Offs - Brenham, TX	Storage	20 ft	\$207.69	\$576.92	\$576.92
P	Haul-Brooke Inc - San Antonio, TX	Storage	20 ft	\$230.77	\$538.46	\$538.46
P	Container Source Storage & Roll-Offs - Brenham, TX	Storage	40 ft	\$284.62	\$576.92	\$576.92
P	Haul-Brooke Inc - San Antonio, TX	Storage	40 ft	\$300.00	\$538.46	\$538.46

The value shown in the 'Rental / 28 days' column is, in some cases, different from the one saved in MySQL because a process applies certain pricing adjustments. These adjustments are designed to increase or decrease the final amount in that column and can be applied selectively to specific record IDs.

3.4 Pricing Adjustments Process

- Find a record in the **pricingadjustment** table, filtering by:
 - Active**
 - Product:** 'all' or 'storage-container'
 - is_applicable:** '%Hub Pricing Tool%'

If there are no records in the previous table, no pricing adjustments are applied.

- The second step is to apply additional filters to the records retrieved from step 1:
 - Check the expiration logic:** if the 'is_expire' flag is set to '1' and the 'expire_date' is greater than or equal to the current date, or if the 'is_expire' flag is '0', the record continues processing.

- The second filter logic checks the value of the '*geography*' column: records with the value '*all*', or where the zip code is included in the list, are allowed to continue processing.
3. The third step is to sort the records by priority and apply only the record with the highest priority.

Also, in a hierarchical manner, check whether it is necessary to apply the adjustment for specific PSPs:

- This applies if the record is of type '*some PSPs*' or '*some confirmed prices*', and the '*storage_container_id*' column is not empty. If so, verify whether the suggestion record is included in the IDs stored in the '*storage_container_id*' column.
 - If the previous conditions are false, check whether the record type is '*all*' or '*all PSPs*', or if the product has a value of '*all*'.
4. The final record from the **pricingadjustment** table determines the amount to be increased or decreased. This adjustment can be applied to all records shown as suggestions, or to a specific record ID, depending on the value of the '*type*' column (e.g., '*some PSPs*' or '*some confirmed prices*').
 - If the '*price_flag*' column has a value of "1", the value in the '*amounts*' column is directly considered as the amount to increase or decrease from the final total.
 - If the '*price_flag*' column has a value of "0", the system takes the value from the '*percentage*' column, divides it by 100, and multiplies the result by the original value from '*customer_standard_charge*'. This calculated value is then used to increase or decrease the final total.
 - To determine whether the adjustment is an addition or a subtraction, the system uses the value in the '*price*' column, which indicates either increase or decrease.

3.5 Saving Records in QuickBase

When the user clicks the Save button, a "Container" is created in the Sales Management ZTERs app in QuickBase.

The new container record is created based on the following information:

Sales Management ZTER's QuickBase	FID	MySQL Field	Rounded?
Site ID	58	Parameters from the request	
Category	341	product_category	

Sales Management ZTER's QuickBase	FID	MySQL Field	Rounded?
Status	22	"Quote in Progress"	
Product Type	344	According the size (10ft, 20 ft, 40ft)	
Standard Charge (Customer)	14	customer_standard_charge	Yes
Delivery Charge (Customer)	12	customer_delivery_charge	Yes
Removal Charge (Customer)	13	customer_removal_charge	Yes
Pricing Tool Quote	748	1	
Pricing Tool Delivery Charge	749	customer_standard_charge	Yes
Pricing Tool Rental Charge	750	customer_delivery_charge	Yes
Pricing Tool Qty	751	1	
Pricing Tool Diagnostics	753	Parameters from the request	
Hauler ID	57	hauler_sales_rid	
Pricing Tool - Vendor List	754	hauler_sales_rid	
Pricing Tool - Zone RID	755	pricing_zone_rid	
Delivery Charge (Hauler)	7	hauler_delivery_charge	
Removal Charge (Hauler)	8	hauler_removal_charge	
Standard Charge (Hauler)	9	hauler_standard_charge	
Fuel Environ Percent (Hauler)	10	hauler_fuel_environ_percent	
Fuel Environ Dollars (Hauler)	11	hauler_fuel_environ_dollars	
% Tax (Hauler)	112	hauler_tax_percent	
Tax \$ (Hauler)	166	hauler_tax_dollars	
Other Charge (Hauler)	110	hauler_other_rate	
Other Description (Hauler Rate)	373	hauler_description	
Other Billing Frequency (Hauler Rate)	374	hauler_frequency	
Dry Run (Hauler)	378	hauler_dry_run_rate	
Relocation (Hauler)	380	hauler_relocation_rate	

As part of the new record, a note is added with specific information such as Hauler ID, Hauler Name, Category, Type, Standard Charge, Delivery Charge, and Removal Charge. For these charges, both the original value and the rounded price are included.

As you can see, the Standard Rate (35%), Delivery Rate (35%), and Removal Rate (35%) are the same as the values displayed in the Pricing Tool in the Hub app.

4 PORTABLE TOILET PRICING

The following information describes how PSP pricing works for toilets and explains the current pricing calculation.

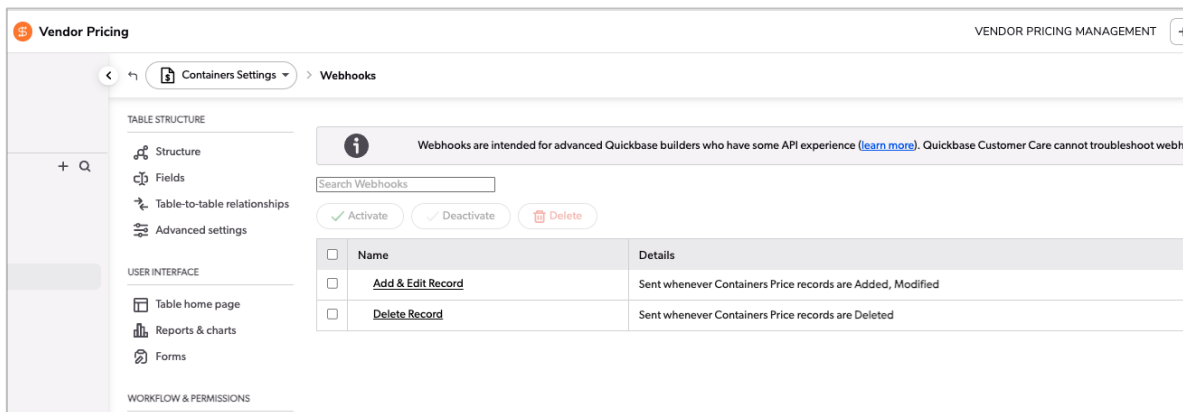

4.1 Vendor Pricing Records

Records from the Vendor Pricing app in QuickBase are saved into the MySQL database.

There are two ways to keep the records updated:

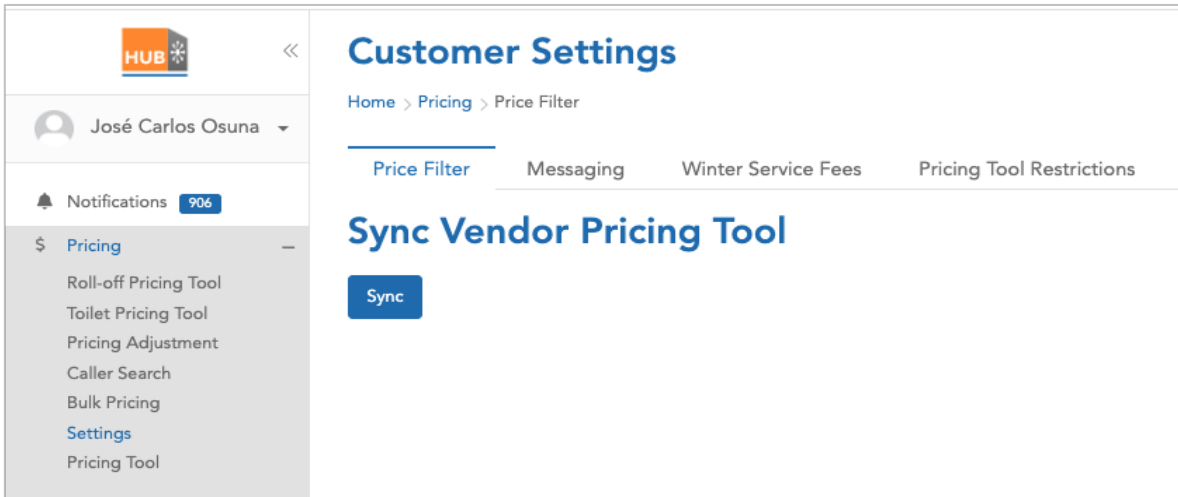

4.1.1 Vendor Pricing app in QuickBase

When a new toilet is added, or a record is edited or deleted, a webhook is triggered to update the corresponding record in the MySQL database.

4.1.2 Hub app

The other way to sync all records is to click the 'Sync' button in **Pricing > Settings** in the Hub application. This option is only visible to users who belong to the “**ZTERS.VendorManagement**” group. This option syncs records for Toilets, Roll-offs, Containers, and Pricing Zones.

4.2 MySQL Database

The following are the fields saved in the MySQL database, along with their respective sources:

MySQL Field	Vendor Pricing QuickBase	FID
rid	Record ID#	3
3	Record ID#	3
11	Product Type - Product Category	11
13	Product Type	13
20	Related Pricing Zone	20
22	Company Name	22
23	Preferred Vendor	23
25	Hauler - Sales RID	25
27	Zone Type	27
33	Zip List	33
35	Standard Charge	35
36	Delivery Charge	36
57	Pricing Zone - Address Miles	57

58	Pricing Zone - Depot Address	58
62	Pricing Zone - Depot Address: Postal Code	62
63	Pricing Zone - Radius Miles	63
68	Pricing Zone - Zip List - Zip Based	68
71	Standard Charge (Customer)	71
72	Delivery Charge (Customer)	72
73	Removal Charge (Customer)	73
79	Total Customer Charge	79
93	Service Frequency	93
94	Pricing Zone - DNU	94
95	DNU	95
96	DNU - Zone or Individual	96

4.3 Hub App > Pricing Tool

By applying filters such as Zip code and address, the Pricing tool in the Hub app shows records or suggestions based on the data stored in our database, originally imported from QuickBase. The following are the columns shown for Portable Toilets:

Column	MySQL Field
Provider Name	22
Product Name	13
Frequency	Event: 11 Construction: 93
Standard	71
Delivery	72
Removal	73

Zip Code*

☒ Portable Toilets
☒ Roll-Offs
☒ Storage Containers
☒ Junk Removals

Portable Toilets

Type
☒ Construction
☐ Event

Service/Week

☒ Standard Toilet
☒ Handwash Station
☒ ADA Toilet
☒ Trailer
☒ Standard Toilet w/Sink

C	Provider Name	Product Name	Frequency	Standard	Delivery	Removal	
P	Houston Rolling Restrooms - Houston, TX	Trailer	1x/week	\$3,146.15	\$0.00	\$0.00	Save

The value shown in the '*Standard*' column is, in some cases, different from the one saved in MySQL because a process applies certain pricing adjustments. These adjustments are designed to increase or decrease the final amount in that column and can be applied selectively to specific record IDs.

4.4 Pricing Adjustments Process

- Find a record in the **pricingadjustment** table, filtering by:
 - Active**
 - Product:** '*all*' or '*toilet*'
 - is_applicable:** '*%Hub Pricing Tool%*'

If there are no records in the previous table, no pricing adjustments are applied.

- The second step is to apply additional filters to the records retrieved from step 1:
 - Check the expiration logic:** if the '*is_expire*' flag is set to '1' and the '*expire_date*' is greater than or equal to the current date, or if the '*is_expire*' flag is '0', the record continues processing.
 - The second filter logic checks the value of the '*geography*' column: records with the value '*all*', or where the zip code is included in the list, are allowed to continue processing.
- The third step is to sort the records by priority and apply only the record with the highest priority.

Also, in a hierarchical manner, check whether it is necessary to apply the adjustment for specific PSPs:

- This applies if the record is of type '*some PSPs*' or '*some confirmed prices*', and the '*toilet_id*' column is not empty. If so, verify whether the suggestion record is included in the IDs stored in the '*toilet_id*' column.
 - If the previous conditions are false, check whether the record type is '*all*' or '*all PSPs*', or if the product has a value of '*all*'.
4. The final record from the **pricingadjustment** table determines the amount to be increased or decreased. This adjustment can be applied to all records shown as suggestions, or to a specific record ID, depending on the value of the '*type*' column (e.g., '*some PSPs*' or '*some confirmed prices*').
- If the '*price_flag*' column has a value of "1", the value in the '*amounts*' column is directly considered as the amount to increase or decrease from the final total.
 - If the '*price_flag*' column has a value of "0", the system takes the value from the '*percentage*' column, divides it by 100, and multiplies the result by the original value from '*customer_standard_charge*'. This calculated value is then used to increase or decrease the final total.
 - To determine whether the adjustment is an addition or a subtraction, the system uses the value in the '*price*' column, which indicates either increase or decrease.

4.5 Saving Records in QuickBase

When the user clicks the Save button, a "Toilet" is created in the Sales Management ZTERs app in QuickBase.

As part of preparing the information needed to create the record, the system performs a query directly to the Toilets entity in the Vendor Pricing app in QuickBase, rather than retrieving the data from our local database. It then uses the retrieved information to attempt to create the new record.

The new toilet record is created based on the following information:

Sales Management ZTER's QuickBase	FID	Vendor Pricing QuickBase FID	Rounded?
Status	9	'Quote in Progress'	
Standard Charge (Customer)	19	71	Yes

5 ROLL-OFFS PRICING

The following information describes how PSP pricing works for roll-offs and explains the current pricing calculation.

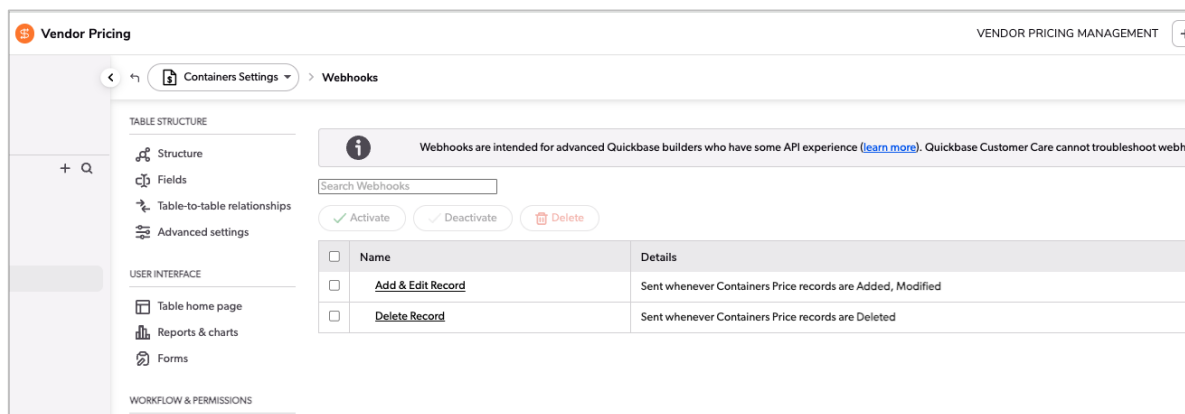

5.1 Vendor Pricing Records

Records from the Vendor Pricing app in QuickBase are saved into the MySQL database.

There are two ways to keep the records updated:

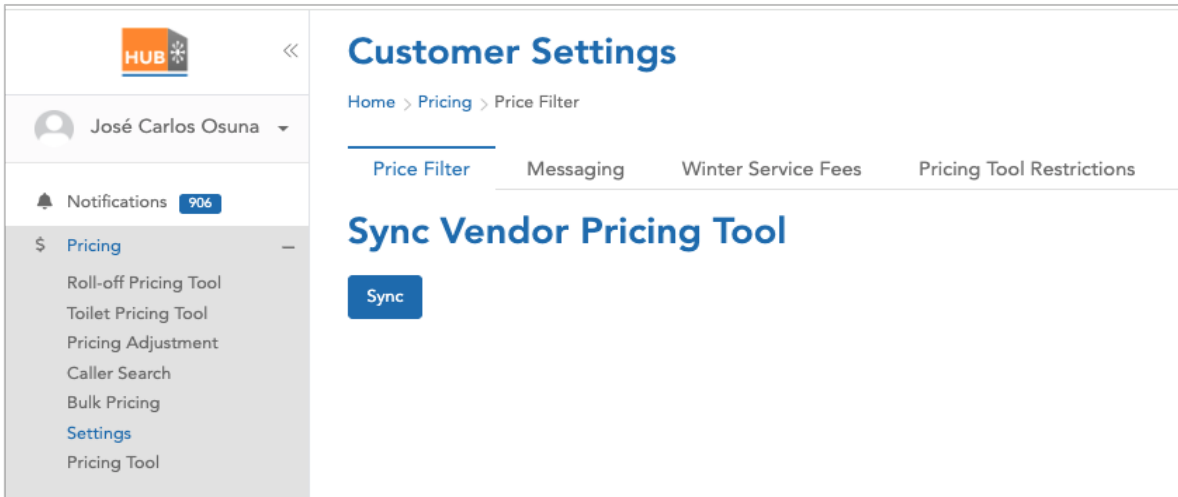

5.1.1 Vendor Pricing app in QuickBase

When a new Roll-off is added, or a record is edited or deleted, a webhook is triggered to update the corresponding record in the MySQL database.

5.1.2 Hub app

The other way to sync all records is to click the 'Sync' button in **Pricing > Settings** in the Hub application. This option is only visible to users who belong to the “**ZTERS.VendorManagement**” group. This option syncs records for Toilets, Roll-offs, Containers, and Pricing Zones.

5.2 MySQL Database

The following are the fields saved in the MySQL database, along with their respective sources:

MySQL Field	Vendor Pricing QuickBase	FID
rid	Record ID#	3
3	Record ID#	3
13	Product Type	13
21	Related Pricing Zone	21
23	Company Name	23
24	Preferred Vendor	24
26	Hauler - Sales RID	26
28	Zone Type	28
34	Zip List	34
36	Standard Charge	36
37	Delivery Charge	37
39	Rental Charge	39
43	Ton Rate	43

MySQL Field	Vendor Pricing QuickBase	FID
59	Standard Charge +\$140 (Suggested)	59
117	Standard Charge +\$140 (Suggested) for 3-15	117
60	Suggested Delivery Charge 35%	60
61	Days Allowed (Suggested)	61
62	Suggested Rental Charge 35%	62
63	Delivery Rate Per	63
65	Tons Included (Suggested)	65
115	Tons Included (Suggested) for 3-15	115
66	Suggested Ton Rate 35%	66
118	Suggested Ton Rate 35% #2	118
69	Debris	69
70	Pricing Zone - Address Miles	70
71	Pricing Zone - Depot Address	71
75	Pricing Zone - Depot Address: Postal Code	75
76	Pricing Zone - Radius Miles	76
81	Pricing Zone - Zip List - Zip Based	81
87	Pricing Zone - DNU	87
88	DNU	88
89	DNU - Zone or Individual	89
91	Total Customer Charge +\$140 (Suggested)	91

5.3 Hub App > Pricing Tool

By applying filters such as Zip code and address, the Pricing tool in the Hub app shows records or suggestions based on the data stored in our database, originally imported from QuickBase. The following are the columns shown for Roll-Offs:

Column	MySQL Field
Provider Name	23
Size	13
Debris	69
Delivery	60
Charge	117
Days	61
Rental Rate	62
Tons	115
Ton Rate	118

Zip Code*

☒ Portable Toilets
 ☒ Roll-Offs
 ☒ Storage Containers
 ☒ Junk Removals

☒ Portable Toilets

☒ Roll-Offs

☒ 10 yard
 ☒ 12 yard
 ☒ 15 yard
 ☒ 20 yard
 ☒ 30 yard
 ☒ 40 yard

☒ General Household
 ☒ Construction
 ☒ Concrete
 ☒ Trash
 ☒ Roofing
 ☒ Recycling
 ☒ Metal
 ☒ Dirt or Green Waste

C	Provider Name	Size	Debris	Delivery	Charge	Days	Rental Rate	Tons	Ton Rate	
P	DumpStor of Houston - Houston, TX	12 yard	General Household	\$0.00	\$545.00	10	\$15.00/day	2 tons	\$106.15	Save
P	DumpStor of Houston - Houston, TX	12 yard	Construction	\$0.00	\$545.00	10	\$15.00/day	2 tons	\$106.15	Save
P	DumpStor of Houston - Houston, TX	12 yard	Trash	\$0.00	\$545.00	10	\$15.00/day	2 tons	\$106.15	Save

The value shown in the 'Charge' column is, in some cases, different from the one saved in MySQL because a process applies certain pricing adjustments. These adjustments are designed to increase or decrease the final amount in that column and can be applied selectively to specific record IDs.

5.4 Pricing Adjustments Process

1. Find a record in the **pricingadjustment** table, filtering by:

- **Active**
- **Product:** 'all' or 'dumpster'
- **is_applicable:** '%Hub Pricing Tool%'

If there are no records in the previous table, no pricing adjustments are applied.

2. The second step is to apply additional filters to the records retrieved from step 1:
 - **Check the expiration logic:** if the 'is_expire' flag is set to '1' and the 'expire_date' is greater than or equal to the current date, or if the 'is_expire' flag is '0', the record continues processing.
 - The second filter logic checks the value of the 'geography' column: records with the value 'all', or where the zip code is included in the list, are allowed to continue processing.
3. The third step is to sort the records by priority and apply only the record with the highest priority.

Also, in a hierarchical manner, check whether it is necessary to apply the adjustment for specific PSPs:

- This applies if the record is of type 'some PSPs' or 'some confirmed prices', and the 'dumpster_id' column is not empty. If so, verify whether the suggestion record is included in the IDs stored in the 'dumpster_id' column.
 - If the previous conditions are false, check whether the record type is 'all' or 'all PSPs', or if the product has a value of 'all'.
4. The final record from the **pricingadjustment** table determines the amount to be increased or decreased. This adjustment can be applied to all records shown as suggestions, or to a specific record ID, depending on the value of the 'type' column (e.g., 'some PSPs' or 'some confirmed prices').
 - If the 'price_flag' column has a value of "1", the value in the 'amounts' column is directly considered as the amount to increase or decrease from the final total.
 - If the 'price_flag' column has a value of "0", the system takes the value from the 'percentage' column, divides it by 100, and multiplies the result by the original value from 'customer_standard_charge'. This calculated value is then used to increase or decrease the final total.
 - To determine whether the adjustment is an addition or a subtraction, the system uses the value in the 'price' column, which indicates either increase or decrease.

5.5 Saving Records in QuickBase

When the user clicks the Save button, a “Toilet” is created in the Sales Management ZTERs app in QuickBase.

As part of preparing the information needed to create the record, the system performs a query directly to the Rolloffs entity in the Vendor Pricing app in QuickBase, rather than retrieving the data from our local database. It then uses the retrieved information to attempt to create the new record.

The new roll-off record is created based on the following information:

Sales Management ZTER's QuickBase	FID	Vendor Pricing QuickBase FID	Rounded?
Debris	18	69	
Size	32	13	
Quantity	59	1	
Status	20	“Quote in Progress”
