2 PREFACE

2.1 About this document

This document provides the User Guide (UGU) for the CUBE platform, describing the main features, user interface components, roles, and operational workflows available within the system.

The purpose of this guide is to help users understand how to navigate the application and perform common operational tasks within CUBE. It includes descriptions of the user interface, explanations of system modules, and step-by-step working procedures for typical activities performed in the platform.

This document is intended to support onboarding, training, and daily operational use of the CUBE system.

2.2 Related documents

All documents or elements used for reference are presented in the following table:

Title	Reference	Author	Version
SOP	HUB SOP	Oscar Rondon	1.0

2.3 Who should read this document

This document is intended for users who interact with the CUBE platform as part of their operational responsibilities. These users may include:

- Account Managers, responsible for managing customer records, service sites, and supporting service-related workflows.
- Customer Success Specialists, responsible for managing leads and supporting internal engagement features such as bonus points and badges.
- Cube Administrators, responsible for managing user access, roles, permissions, and system configuration.
- ZTERS team members, who require an understanding of the CUBE platform for operational, coordination, or support purposes.

This guide is also useful for new team members, support personnel, and stakeholders who need a clear understanding of the platform's functionality, structure, and core workflows.

2.4 Terminology

Term Used	Description
CUBE	The internal web application used to manage customers, service locations, operational resources, and reporting tools within the ZTERS platform.
Customer	An individual or organization receiving services managed through the CUBE system.
Site	A physical location associated with a customer where services are delivered or maintained.
Service Provider	A vendor or partner responsible for delivering services associated with customer sites.
User Role	A predefined set of permissions that determines what actions a user can perform within the system.
Bonus Points	An internal recognition system used to reward team members for achievements or contributions.

Term Used	Description
Badge	A recognition element assigned to users based on achievements or participation within the platform.
Report	A system-generated view or dataset used to analyze operational or business information within the platform.
Bulk Actions	System functionality that allows users to perform actions on multiple records simultaneously within data tables.
Data Export	A functionality that allows users to extract system data (e.g., CSV format) for external use, reporting, or analysis.
CWS	The CWS (Commercial Waste Services) is a functional group within ZTERS responsible for managing waste service operations, including monitoring tools and asset-related functionalities.
VM	The Vendor Management is a functional group responsible for managing vendor-related configurations such as pricing and service provider data.
Leads	A functional group or role focused on managing sales leads and pipeline activities within the platform.

2.5 Conventions Used

The following structures are used as recommendations.

Info: Supplementary Information

Tip: A recommendation or useful advice

Warning: A warning or important notice

Note: A notice.

3 CUBE OVERVIEW

3.1 Description

The CUBE platform is a web-based application designed to support the management of customers, service locations, operational resources, and internal activities within the ZTERS ecosystem. It provides a centralized interface where users can access and manage data required for daily operations.

The system enables users to manage customer records, configure service sites, coordinate with service providers, control user access and permissions, and generate analytical reports. It also includes features that support internal engagement through recognition elements such as bonus points and badges, as well as system-wide functionalities for managing and interacting with data.

CUBE organizes its functionality into several main sections accessible through the left navigation panel:

- **Customerz:** Manage customer records, contacts, service sites, and financial information.
- **Salez:** Manage products, service tickets, line items, and invoicing activities.
- **Operationz:** Manage service providers, fulfillment processes, vendor coordination, and pricing configurations.
- **Userz:** Manage user accounts, roles, permissions, and groups.
- **Administratorz:** Configure system settings, codes, and workflow-related definitions.
- **Zeepz:** Manage leads, employees, and internal recognition elements such as bonus points and badges.
- **Reportz:** Access reporting tools, including standard, custom, AI-driven, and Power BI reports.

These sections enable users to perform daily operational tasks efficiently while maintaining proper access control, data consistency, and visibility across the platform.

3.2 User Interface

Screenshots, descriptions, and other important information about the application's interface and functionalities.

3.2.1 Login Page

The **Login Page** is the entry point to the CUBE platform. Users must authenticate with their credentials before accessing the system.

The screenshot shows the CUBE Login Page. On the left, there is a CUBE logo with the tagline "Customer. Zeep. Service Provider." below it. On the right, there is a white login box with the heading "Welcome to CUBE". Inside the box, there are two input fields: "Email Address" and "Password". Below the "Password" field is a link that says "Forgot password?". At the bottom of the box is an orange "Log In" button.

3.2.1.1 Forgot Password

The Forgot Password option allows users to recover access to their CUBE account if they are unable to log in due to a forgotten password. When this option is selected, the system prompts the user to enter the email address associated with their account. After submitting the request, the system sends a password recovery email containing instructions to reset the password.

Password Recovery Process

1. On the Login Page, click Forgot Password.
2. Enter the email address associated with your CUBE account.
3. Click Send Recovery Mail.
4. Check your email inbox for the password recovery message.
5. Follow the instructions provided in the email to reset your password.

The screenshot shows the "Forgot Password?" form. It has a heading "Forgot Password?" followed by the text "We need your email address for you can access your account, then we'll send a recovery mail." Below this is an "Email Address" input field. At the bottom, there is an orange "Send Recovery Mail" button and a link that says "Back to login".

After completing the password reset process, the user can return to the Login Page and access the CUBE platform using the newly created password.

3.3 Dashboard

The **Dashboard** is the main landing page displayed after a user successfully logs into the CUBE platform. It provides an overview of system activity and quick access to frequently used features.

4 CUSTOMERZ SECTION

The **Customerz** section centralizes all customer-related information and operations within the CUBE platform. It allows users to manage customer profiles, contacts, service locations, and financial configurations such as billing preferences and transactions. This section serves as the foundation for linking customers to services, sites, and operational activities. It ensures accurate customer data management across the system.

4.1 Customers

This module displays a list of all customer records with key details such as name, contact information, and company. Users can search, filter, and manage records, as well as create new customers. This is the main entry point for customer management.

4.2 Customer Contacts

This module manages individual contacts associated with each customer account. This section is expected to store contact details such as names, roles, emails, and phone numbers, enabling effective communication and coordination with customer stakeholders. Contacts are typically linked to specific customer records.

4.3 Sites

This module manages service locations associated with customers. This section allows users to organize and track where services are delivered. It ensures operations are tied to the correct physical location.

4.4 Reviews

This module provides access to customer feedback and service evaluations. This section helps monitor service quality and identify improvement areas. It supports visibility in customer satisfaction.

4.5 CC Transactions

This module tracks credit card transactions linked to customer accounts. This includes payment activity and transaction status. It supports financial tracking and transparency.

4.6 Credit Limit Requests

This module manages requests related to customer credit limits. Users can review, approve, or update credit capacity. It supports financial control and risk management.

4.7 Accounting Inquiries

This module handles billing-related questions and financial issues from customers. This section supports tracking and resolving accounting concerns. It improves coordination between teams.

4.8 Billing Preferences

This module defines how customers are billed, including invoicing methods and payment preferences. This ensures billing aligns with customer agreements. It supports flexible financial operations.

5 SALEZ SECTION

The **Salez** section focuses on managing the commercial and transactional aspects of the platform. It includes tools for handling products, service tickets, line items, and invoicing processes. Users can track pricing, manage assets, and monitor financial interactions related to sales. This section supports the full lifecycle of service transactions from creation to billing.

5.1 Products

This module manages the catalog of products and services available in the system. It allows users to define product details, pricing, and availability. It serves as the foundation for sales and service transactions.

5.2 Service Tickets

This module manages service tickets representing customer requests or operational tasks. It allows users to track the lifecycle of a service from creation to completion. It is central to managing service execution.

5.3 Line Items

This module manages individual items within service tickets, including quantities, pricing, and service details. It provides a detailed breakdown of services and charges. It ensures accuracy in billing and configuration.

5.4 Invoices

This module manages customer invoices, including creation, tracking, and status updates. It allows users to monitor billing and payment activity. It supports the financial lifecycle of transactions.

5.5 AP Hub

This module manages accounts payable processes, including vendor payments and financial reconciliation. It supports tracking outgoing payments. It ensures financial operations are properly recorded.

5.6 Pricing History

This module provides access to historical pricing data for products and services. It allows users to track changes over time. It supports auditing and pricing analysis.

5.7 Z Sight Monitors

This module provides visibility into operational and sales metrics through monitoring tools. It allows users to track system performance and activity. It supports data-driven decision-making.

5.8 Assets

This module manages assets associated with services, customers, or operations. It allows users to track asset details and assignments. It supports inventory and operational management.

6 OPERATIONZ SECTION

The **Operationz** section manages the execution and coordination of services within the platform. It includes tools for handling service providers, fulfillment processes, vendor interactions, and pricing configurations. Users can track operational activities, manage service availability, and ensure proper service delivery. This section is critical for aligning internal operations with external providers.

6.1 Service Providers

This module manages vendors responsible for delivering services. It allows users to store provider details and maintain operational relationships. It supports coordination between internal teams and external partners.

6.2 Service Provider Contacts

This module manages contact information for service providers and their representatives. It ensures proper communication channels are maintained. Contacts are linked to specific providers.

6.3 Fulfillment Tickets

This module manages tickets related to service fulfillment and execution. It allows users to track delivery, scheduling, and completion of services. It ensures customer requests are properly executed.

6.4 VM Tickets

This module manages vendor management tickets used for coordination with service providers. It supports tracking communication and resolving operational issues. It helps align vendor-related workflows.

6.5 Pricing Zones

This module defines geographic or operational zones used for pricing calculations. It allows users to organize areas based on service coverage. It supports location-based pricing strategies.

6.6 Pricings

This module manages pricing structures, rates, and rules for services and products. It allows users to configure how pricing is applied. It supports flexible and accurate pricing management.

6.7 Hauler Quotes

This module manages quotes submitted by service providers for service requests. It allows users to review and compare vendor pricing. It supports decision-making in service procurement.

6.8 VM Activities

This module tracks activities related to vendor management operations. It provides visibility into interactions and updates with service providers. It supports monitoring of vendor workflows.

6.9 Price Increases

This module manages updates and adjustments to pricing. It allows users to track and apply approved price changes. It supports financial control and transparency.

6.10 Out of Stock

This module tracks products or services that are currently unavailable. It provides visibility into stock limitations. It supports operational planning and service availability.

6.11 Zip Codes

This module manages geographic areas where services are available. It allows users to associate locations with providers and pricing. It supports accurate service coverage configuration.

6.12 Vendor Ratings

This module tracks and evaluates service provider performance. It allows users to review ratings and feedback. It supports quality control and vendor assessment.

6.13 Hauler Business Hours

This module manages the availability schedules of service providers. It allows users to define working hours and service windows. It supports scheduling and operational planning.

7 ADMINISTRATORZ SECTION

The **Administratorz** section provides system configuration and control capabilities. It allows users to define codes, states, and system rules that govern workflows and data structure. This area supports internal administration, task management, and system customization. It ensures consistency and standardization across the platform.

Note: The Administratorz section is restricted by role-based access and only visible to admin users.

7.1 Products

This module manages the zters products and services. It ensures consistency across the system. It supports structured data management.

7.2 Product Codes

This module manages standardized codes used to identify products and services. It ensures consistency across the system. It supports structured data management.

7.3 Ticket Codes

This module defines codes used to classify and categorize tickets. It helps organize service requests and workflows. It supports better tracking and reporting.

7.4 States

This module manages system states used in workflows, such as statuses or process stages. It ensures consistency in process tracking. It supports workflow standardization.

7.5 Notes

This module manages internal notes associated with system records. It allows users to add contextual information or comments. It supports collaboration and traceability.

7.6 Vendor Link

This module manages relationships between service providers and system entities. It ensures proper linkage across modules. It supports data consistency and integration.

7.7 Tasks

This module manages internal tasks assigned to users. It allows tracking of activities and responsibilities. It supports operational coordination.

7.8 Lead Sources

This module manages the origin of leads, such as campaigns or referrals. It helps track how leads are generated. It supports sales analysis and reporting.

7.9 Lead Parent

This module manages hierarchical relationships between leads or accounts. It allows linking related entities. It supports better organization of sales data.

7.10 Answered Phone Calls

This module tracks and logs phone call interactions. It provides visibility into communication activities. It supports customer interaction tracking.

8 USERZ SECTION

The **Userz** section is responsible for managing user access and system security. It includes tools for creating users, defining roles, assigning permissions, and organizing groups. This section ensures that users have appropriate access based on their responsibilities. It supports role-based access control and system governance.

8.1 Users

This module manages user accounts with access to the platform. It allows creating, editing, and maintaining user information. It supports overall user administration.

8.2 Roles

This module defines roles that determine user responsibilities and access levels. It allows grouping permissions based on job functions. It supports role-based access control.

8.3 Permissions

This module manages detailed access rights assigned to roles. It allows controlling what users can view or modify. It ensures system security and proper access control.

8.4 Groups

This module organizes users into groups for easier management. It allows assigning roles and permissions at a group level. It simplifies user administration.

9 ZEEPZ SECTION

The **Zeepz** section focuses on internal engagement and sales pipeline management. It includes tools for managing leads, employees, and recognition programs such as bonus points and badges. Users can track team participation and process reward redemptions. This section supports both operational engagement and sales-related activities.

9.1 Leads

This module manages potential customers and sales opportunities. It allows users to track lead information and progression. It supports pipeline management and conversion tracking.

9.2 Employees

This module manages internal employee records and related information. It allows users to maintain employee data within the system. It supports internal administration and tracking.

9.3 Bonus Points

This module manages the internal rewards system used to recognize employee contributions. It allows tracking and assigning points. It supports engagement and recognition initiatives.

9.4 Badges

This module manages recognition badges awarded to users. It allows creating and assigning badges based on achievements. It supports gamification and employee engagement.

10 REPORTZ SECTION

The **Reportz** section provides access to data analysis and reporting tools within the platform. It includes predefined, custom, and AI-generated reports, as well as integrations with Power BI dashboards. Users can analyze operational and financial data to support decision-making. This section enables visibility into system performance and business insights.

10.1 Static Reports

This module provides access to predefined reports with standard system metrics. It allows users to view consistent and ready-to-use data. It supports routine monitoring and analysis.

10.2 Custom Reports

This module allows users to create reports based on selected data fields and filters. It provides flexibility to generate tailored insights. It supports specific business and operational needs.

10.3 AI Reports

This module generates insights using AI-based analysis of system data. It helps identify trends, patterns, and potential predictions. It supports advanced decision-making.

10.4 Power BI Reports

This module provides access to reports integrated with Microsoft Power BI dashboards. It enables advanced data visualization and analytics. It supports business intelligence reporting.

11 OVERALL SYSTEM FUNCTIONALITIES

This section describes common functionalities available across multiple modules within the CUBE platform, such as data filtering, bulk actions, export options, and table interactions. These features provide users with efficient ways to manage and analyze data regardless of the module being used.

11.1 Bulk Actions

Users can select multiple service provider records and apply actions to them simultaneously. Steps to Perform Bulk Actions:

1. Navigate to Operationz → Service Providers.
2. Locate the list of service providers displayed in the table.
3. Use the checkboxes in the Actions column to select one or more records.
 - To select all records on the page, use the checkbox located in the table header.
4. Once records are selected, available bulk actions can be applied (depending on system configuration).
5. Confirm the action if prompted.

Actions	Company Name	Verified Service Provider	DNU	Record ID# (Service Provider ID)
☒	Abbott and Sons	☐	☐	285
☒	Anderson Ltd	☒	☐	136
☒	Armstrong-Becker	☒	☐	184
☒	Auer, Schmitt and Medhurst	☒	☐	270
☒	Bahringer, McKenzie and Gutmann	☒	☐	68
☒	Balistreri, Hansen and Marks	☒	☐	172
☒	Bartell, Reynolds and Keeling	☐	☐	264

11.2 Export and Print Options

Users can export or print service provider data using the options available in the interface:

1. Navigate to Operationz → Service Providers.
2. Click the three-dot menu (⋮) located in the upper-right corner of the table.
3. Select one of the following options:
 - View Summary
 - Export CSV
 - Print

12 SETTINGS

12.1 Header Controls

The **Top Navigation Bar** is located at the upper-right section of the CUBE interface and provides quick access to commonly used system functions and user-related options. These controls allow users to perform actions such as searching within the system, viewing notifications, accessing system utilities, and managing their user profile.

Icon / Element	Name	Description
	Search	Allows users to quickly search within the application.
	Notifications	Displays system alerts, updates, or important notifications.
	Quick Actions	Provides access to additional system tools or quick actions.
	Favorites	Allows users to bookmark or access frequently used items.
 Test User Developer	User Profile	Displays the logged-in user information and provides access to account-related options such as profile settings or logout.

14 WORKING PROCEDURES

Workflows (including diagrams if applicable) for different options within the application.

14.1 Account Manager Working Procedures

14.1.1 Create and Manage a Customer Record

14.1.1.1 Purpose

This procedure describes how an Account Manager creates, searches, and manages customer records within the CUBE platform. Customer records store key information required for service delivery, billing, and operational activities.

14.1.1.2 Roles and Responsibilities

Role	Responsibility
Account Manager	Creates and manages customer records
Cube Admin	Maintains system configuration and user access if required

14.1.1.3 Preconditions

- The user must be logged into the CUBE platform.
- The user must have an Account Manager or Cube Admin role.
- The user must have access to Customerz → Customers.
- Required customer information must be available (name, contact details, company).

14.1.1.4 Process Diagram

Warning: Pending Diagram

14.1.1.5 Procedure Steps

Create a New Customer

1. Navigate to Customerz → Customers.
2. Click the New Customer button.
3. Enter the required customer information (e.g., name, email, phone, company).
4. Review the entered information.
5. Click Save to create the record.
6. Verify the customer appears in the customer list.

Search and Filter Customers

1. Use the Search bar to locate specific customer records.
2. Use column filters to refine results (e.g., name, email, company).
3. Sort columns as needed to organize the data.

Manage Existing Customers

1. Locate the customer in the table.
2. Use the Actions column to:
3. View details
4. Edit the record
5. Perform additional actions (if available)
6. Save any updates made to the customer record.

14.1.1.6 System Behavior

Action	System Behavior
User opens Customers module	The system retrieves and displays a list of customer records.
User performs search/filter	The system dynamically updates the table based on criteria.
User creates a customer	The system validates input and stores the record in the database.
User updates a record	The system saves changes and refreshes the table view.

14.1.1.7 Results

- A new customer record is created and stored in the system.
- Customer information is available for linking to sites, services, and billing.
- Updated records are reflected immediately in the customer list.

14.1.1.8 Exceptions / Error Handling

Please refer to the troubleshooting section in BookStack.

14.1.2 Manage Service Sites

14.1.2.1 Purpose

This procedure describes how an Account Manager creates, searches, and manages service site records within the CUBE platform. Service sites represent physical locations where services are delivered.

14.1.2.2 Roles and Responsibilities

Role	Responsibility
Account Manager	Creates and manages service site records associated with customers
Cube Admin	Maintains system configuration and access permissions if necessary

14.1.2.3 Preconditions

- The user must be logged into the CUBE platform.
- The user must have an Account Manager or Cube Admin role.
- A customer record must already exist.

- The user must have access to Customerz → Sites.
- Required site information must be available (site name, location, associated customer).

14.1.2.4 Process Diagram

Warning: Pending Diagram

14.1.2.5 Procedure Steps

Create a New Site

1. Navigate to Customerz → Sites.
2. Click the New Site button.
3. Enter required site information (site name, location, associated customer).
4. Review the entered data.
5. Click Save to create the site record.
6. Verify the site appears in the list.

Search and Filter Sites

1. Use the Search bar to locate specific site records.
2. Apply filters based on location, customer, or other available fields.
3. Sort columns to organize site information.

Manage Existing Sites

1. Locate the site in the table.
2. Use the Actions column to:
3. View details
4. Edit site information
5. Perform additional actions (if available)
6. Save updates to the site record.

14.1.2.6 System Behavior

Action	System Behavior
User opens Sites module	The system retrieves and displays site records.
User searches or filters	The system updates the table dynamically.
User creates a site	The system validates data and stores the record.
User updates a site	The system saves changes and refreshes the list.

14.1.2.7 Results

- A new service site is created and linked to a customer.
- Site records are available for service assignment and operations.
- Updates are reflected immediately in the system.

14.1.2.8 Exceptions / Error Handling

Please refer to the troubleshooting section in BookStack.

14.2 Customer Success Specialist Working Procedures

14.3 Admin Working Procedures
